### PROGRAMME INFORMATION

<b>Programme:</b>	The International EPD® System
<b>Address:</b>	EPD International AB Box 210 60 SE-100 31 Stockholm Sweden
<b>Website:</b>	<a href="http://www.environdec.com">www.environdec.com</a>
<b>E-mail:</b>	<a href="mailto:info@environdec.com">info@environdec.com</a>

CEN standard EN 15804 serves as the Core Product Category Rules (PCR)

Product Category Rules (PCR):

Construction products, 2019:14, version 1.11, UN CPC 54, valid until 20-12-2024

PCR review was conducted by:

The Technical Committee of the International EPD® System. Review chair: Claudia A. Peña  
- Contact via the Secretariat [www.environdec.com/contact](http://www.environdec.com/contact)

Independent third-party verification of the declaration and data, according to ISO 14025:2010, via:

EPD verification by individual verifier

Third-party verifier: Guido Croce

Approved by:

International EPD® System Technical Committee, supported by the Secretariat

Procedure for follow-up of data during EPD validity involves third party verifier:

Yes  No

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with UNI EN 15804. For further information about comparability, see EN 15804 and ISO 14025.

## COMPANY INFORMATION

**Owner of the EPD:**  
Marcegaglia Carbon Steel S.p.A.  
info.carbonsteel@marcegaglia.com

**Contact:**  
To obtain more information about this product declaration and / or its configurations, the following references are available:  
Mail: info@marcegaglia.com  
Phone: +39 0376 6851

**Description of the organisation:**  
Marcegaglia Carbon Steel S.p.A. is the company of the Marcegaglia Group that transforms and markets flat products (coils, strips, and sheets) in carbon and pre-painted steel (PPGI) and carbon steel pipes. The company, thanks to advanced production technology and the most modern automation systems, enters the market for the creation of any type of finish on components and accessories, allowing it to satisfy the most demanding and customized requests.

Product-related or management system-related certifications:

- Quality management system compliant with the requirements of the standard UNI EN ISO 9001:2015 (certificate n° 10233/04/S - valid until 14/01/2025);
- Environmental management system compliant with the requirements of the standard UNI EN ISO

## PRODUCT INFORMATION

**Product name:**  
Profiled tubes from hot and cold rolled strip, heat treated and drawn

**Product identification:**  
Profiled tubes from hot and cold rolled strip, heat treated and drawn

**Product description:**  
From the first transformation, as part of its controlled production chain, Marcegaglia Carbon Steel obtains the widest range of carbon steel welded tubes in the world. The Marcegaglia Carbon Steel production of tubes obtained from hot rolled, cold and galvanized strip covers a wide range of uses, guaranteeing specific suitability for subsequent reworking.

With great versatility and flexibility, Marcegaglia precision tubes allow you to interpret and respond to the needs of specific uses such as radiators, roller systems, greenhouses, doors and windows, fences, furniture, sports equipment, automotive, mechanical industry and many others. Marcegaglia is able to provide the widest range in the world of welded and cold-calibrated steel tubes for precision uses, to meet the needs of each market segment.

14001:2015 (certificato n° EMS-262/S - valid until 25/07/2025);

- Health and safety management system compliant with the requirements of the standard UNI ISO 45001:2018 (certificate n° OHS-260 - valid until 25/09/2025);
- Energy management system compliant with the requirements of the standard UNI CEI EN ISO 50001:2018 (certificate n° EnergyMS-137 - valid until 14/12/2023);
- Social responsibility management system compliant with the requirements of the standard SA 8000:2014 (certificate n° SA-2040 - valid until 04/04/2025).

### Name and location of production site(s):

- Boltiere plant: Marcegaglia street, 2 - 24040 - Boltiere (BG);
- Casalmaggiore plant: VVanoni street, 25 - 26041 Casalmaggiore (CR);
- Dusino San Michele plant: Corso Industria street, 20 - 14010 - Dusino San Michele (AT);
- Gazoldo degli Ippoliti plant: Bresciani street, 16 - 46040 - Gazoldo Degli Ippoliti (MN);
- Lomagna plant: Milano street, 41 - 23871 - Lomagna (LC);
- Rivoli plant: Acqui street, 68 - 10098 - Rivoli (TO).

The range is divided into round, square, rectangular, oval, elliptical, triangular and semi-oval tubes and is completed by a very wide range of special shapes, with the possibility of customization on customer needs.

Marcegaglia supplies a wide range of cold-formed welded tubes for structural uses (CE approval) and hollow sections of unalloyed and fine-grain steels, hot finished or cold formed with heat treatments for special structural uses.

Finally, Marcegaglia Carbon Steel boasts a wide range of precision cold drawn tubes, welded and seamless, in all varieties of carbon and low alloy steels, for automotive, hydraulic and mechanical applications.

From the company website it is possible to consult the product catalogs within which the technical characteristics of the same are described in detail.

### UN CPC CODE:

UN CPC 4128 Tubes, pipes and hollow profiles, of steel

### Geographical scope:

worldwide

## LCA INFORMATION

### Functional unit:

The functional unit of the system considered is 1 tonne of tube product.

### Reference service life - RSL:

For the products under study it is not possible to quantify the exact useful life as much also depends on their future use. However, it is emphasized that even when the deadline is reached, the product can be recycled and reused again to generate other raw materials.

### Time representativeness:

The data used are representative of the year 2021.

### Database(s) and LCA software used:

Ecoinvent database v.3.8, November 2021 / Software used SimaPro rel. 9.3.0.3.

### Description of the system boundaries:

The study is "Cradle to gate with modules C1 - C4 and module D (A1 - A3 + C + D)" (reference: PCR 2019: 14 vers. 1.1 valid until 31-12-2022).

Modules A1-A3 include material procurement processes (raw and auxiliary materials) as well as manufacturing processes.

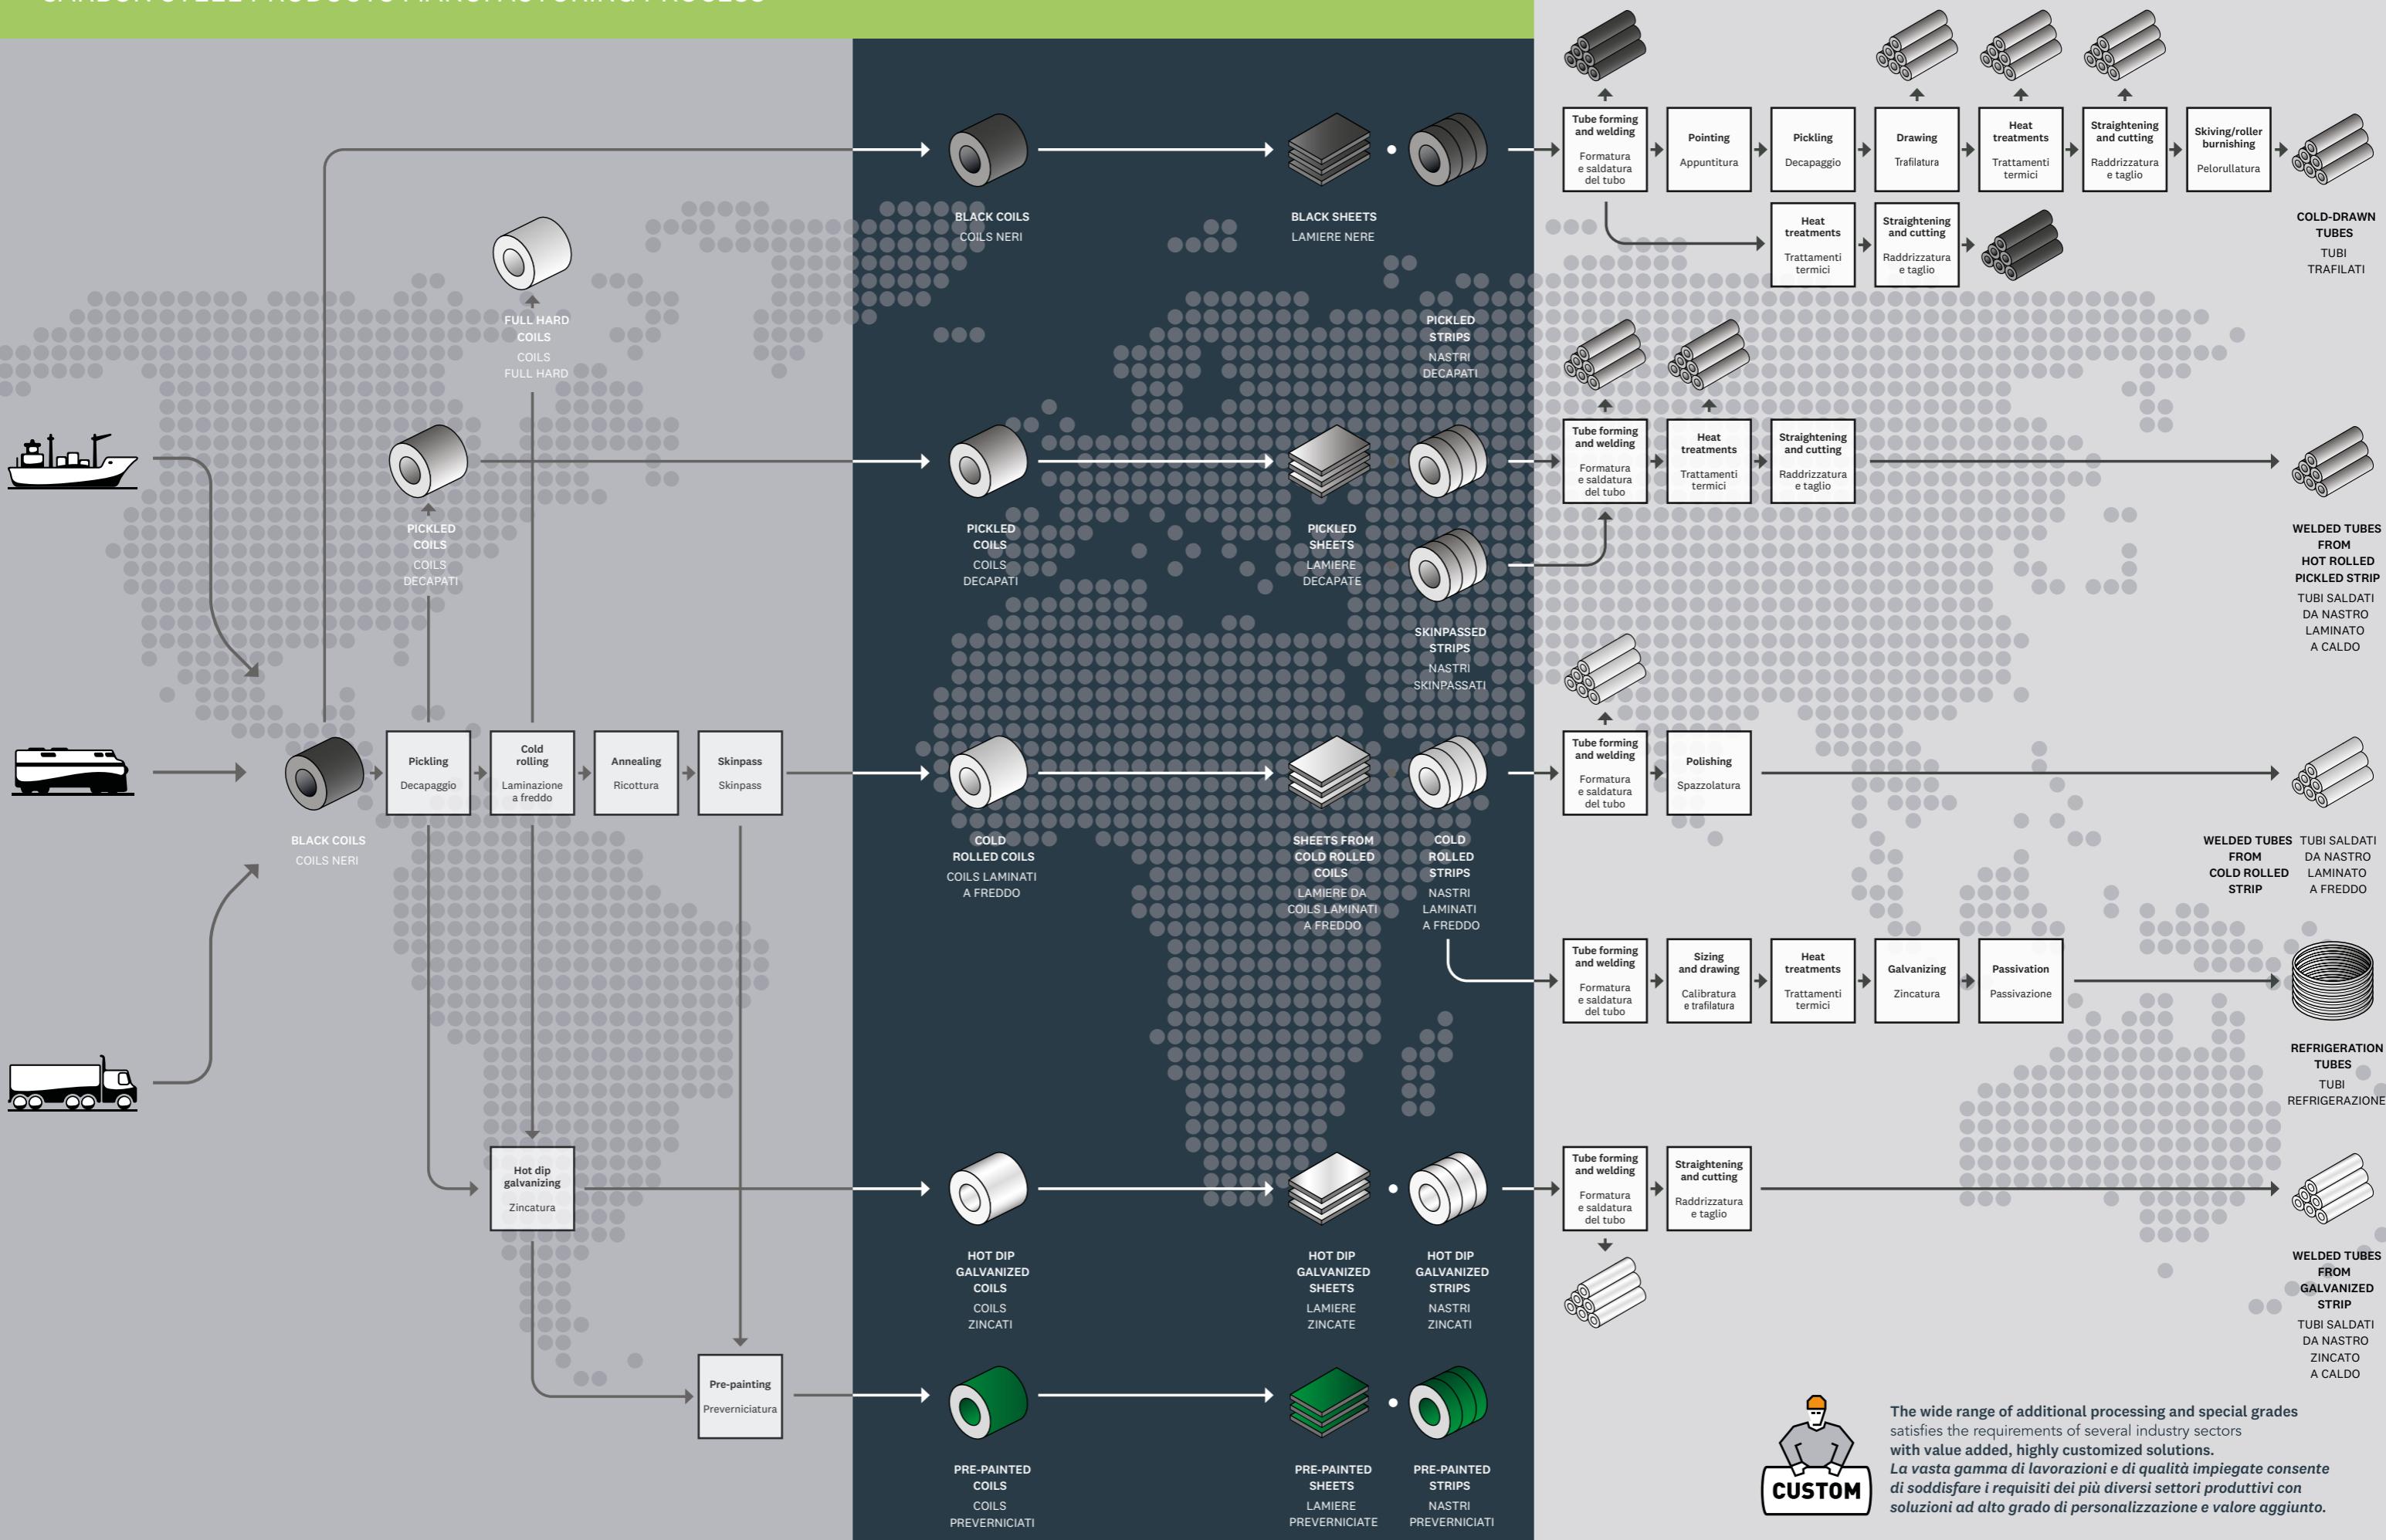

Modules C1-C4 consider the uninstallation, transport, sorting and disposal of components deriving from the end-of-life operations of road barriers. These operations are not directly controllable by the company: in this regard, literature data relating to the construction sector are therefore used. It is considered:

- an average consumption of diesel fuel equivalent to 143.2 MJ as well as 0.013 MWh of electricity for each ton of demolished material;
- an average distance of 80 km to transport the material to the recovery center;
- the same energy consumption already mentioned for the demolition activity also for the waste treatment activity.

Module D considers the recovery and recycling potential of steel deriving from end-of-life processes: the calculation of the environmental benefits deriving from the recovery of steel is based on the indications provided by the document "Product Category Rules for Type III environmental product declaration of construction products to EN 15804: 2012 - Par. 6.3.4.6. Benefits and loads beyond the product system boundary, information Module D".

# DIAGRAM OF THE PRODUCTION PROCESS OF PRODUCTION OF TUBE

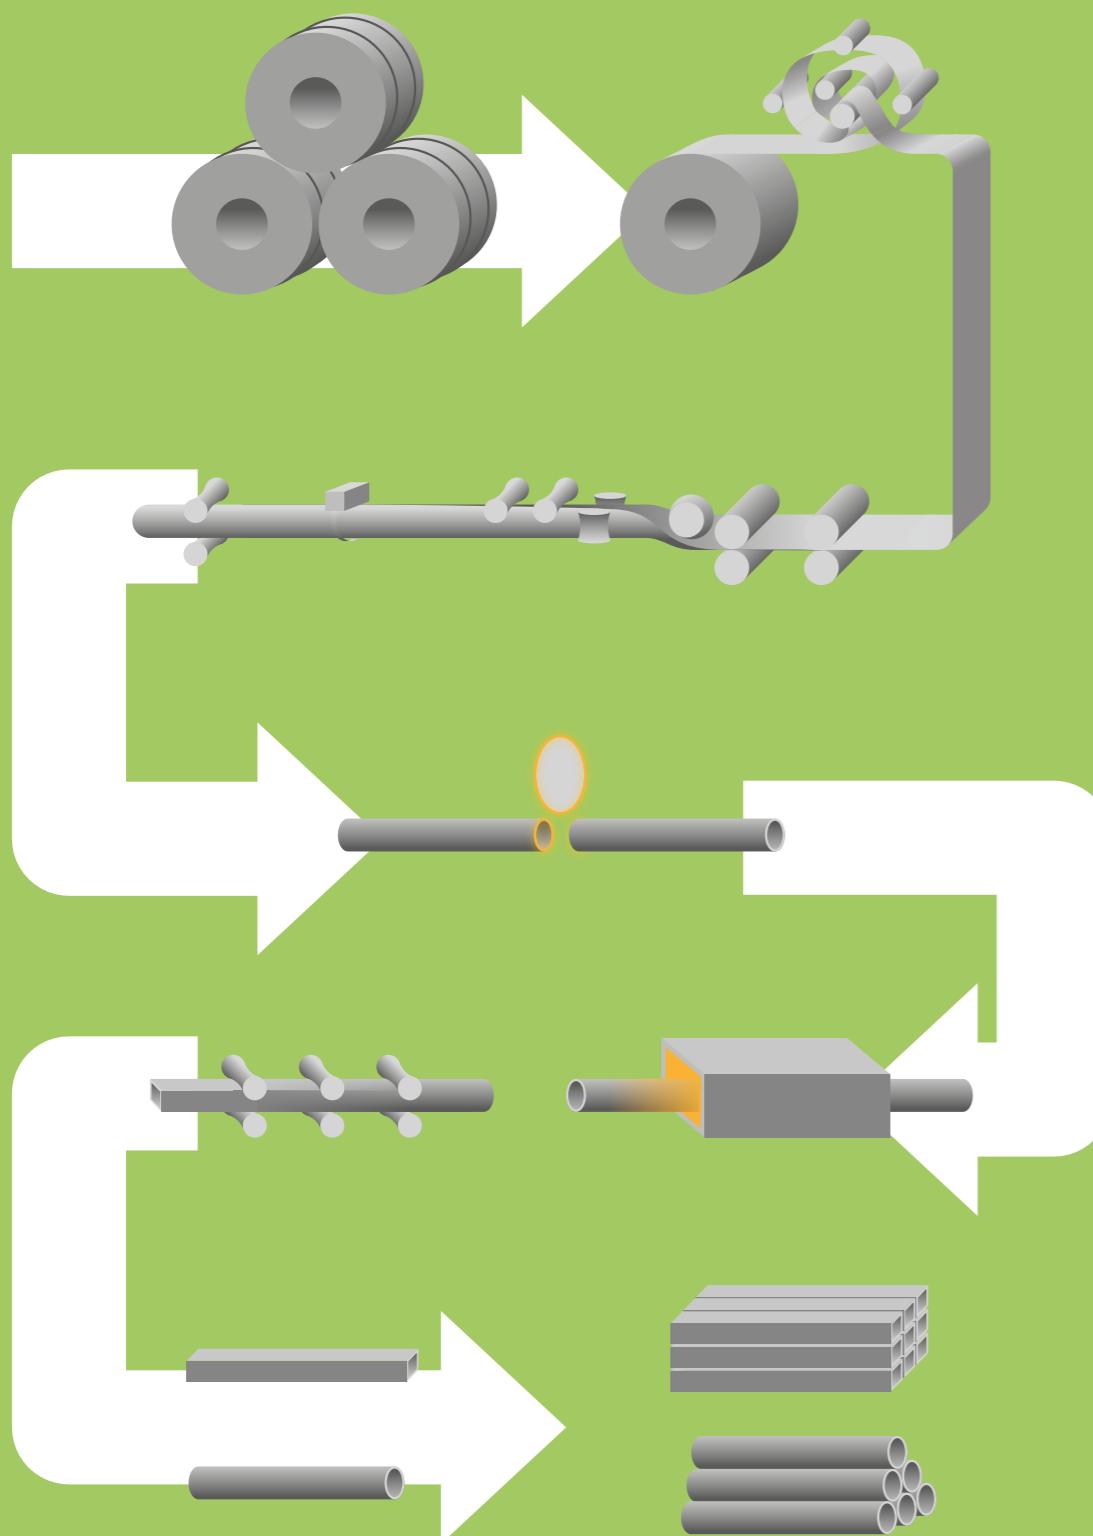

## CARBON STEEL PRODUCTS MANUFACTURING PROCESS

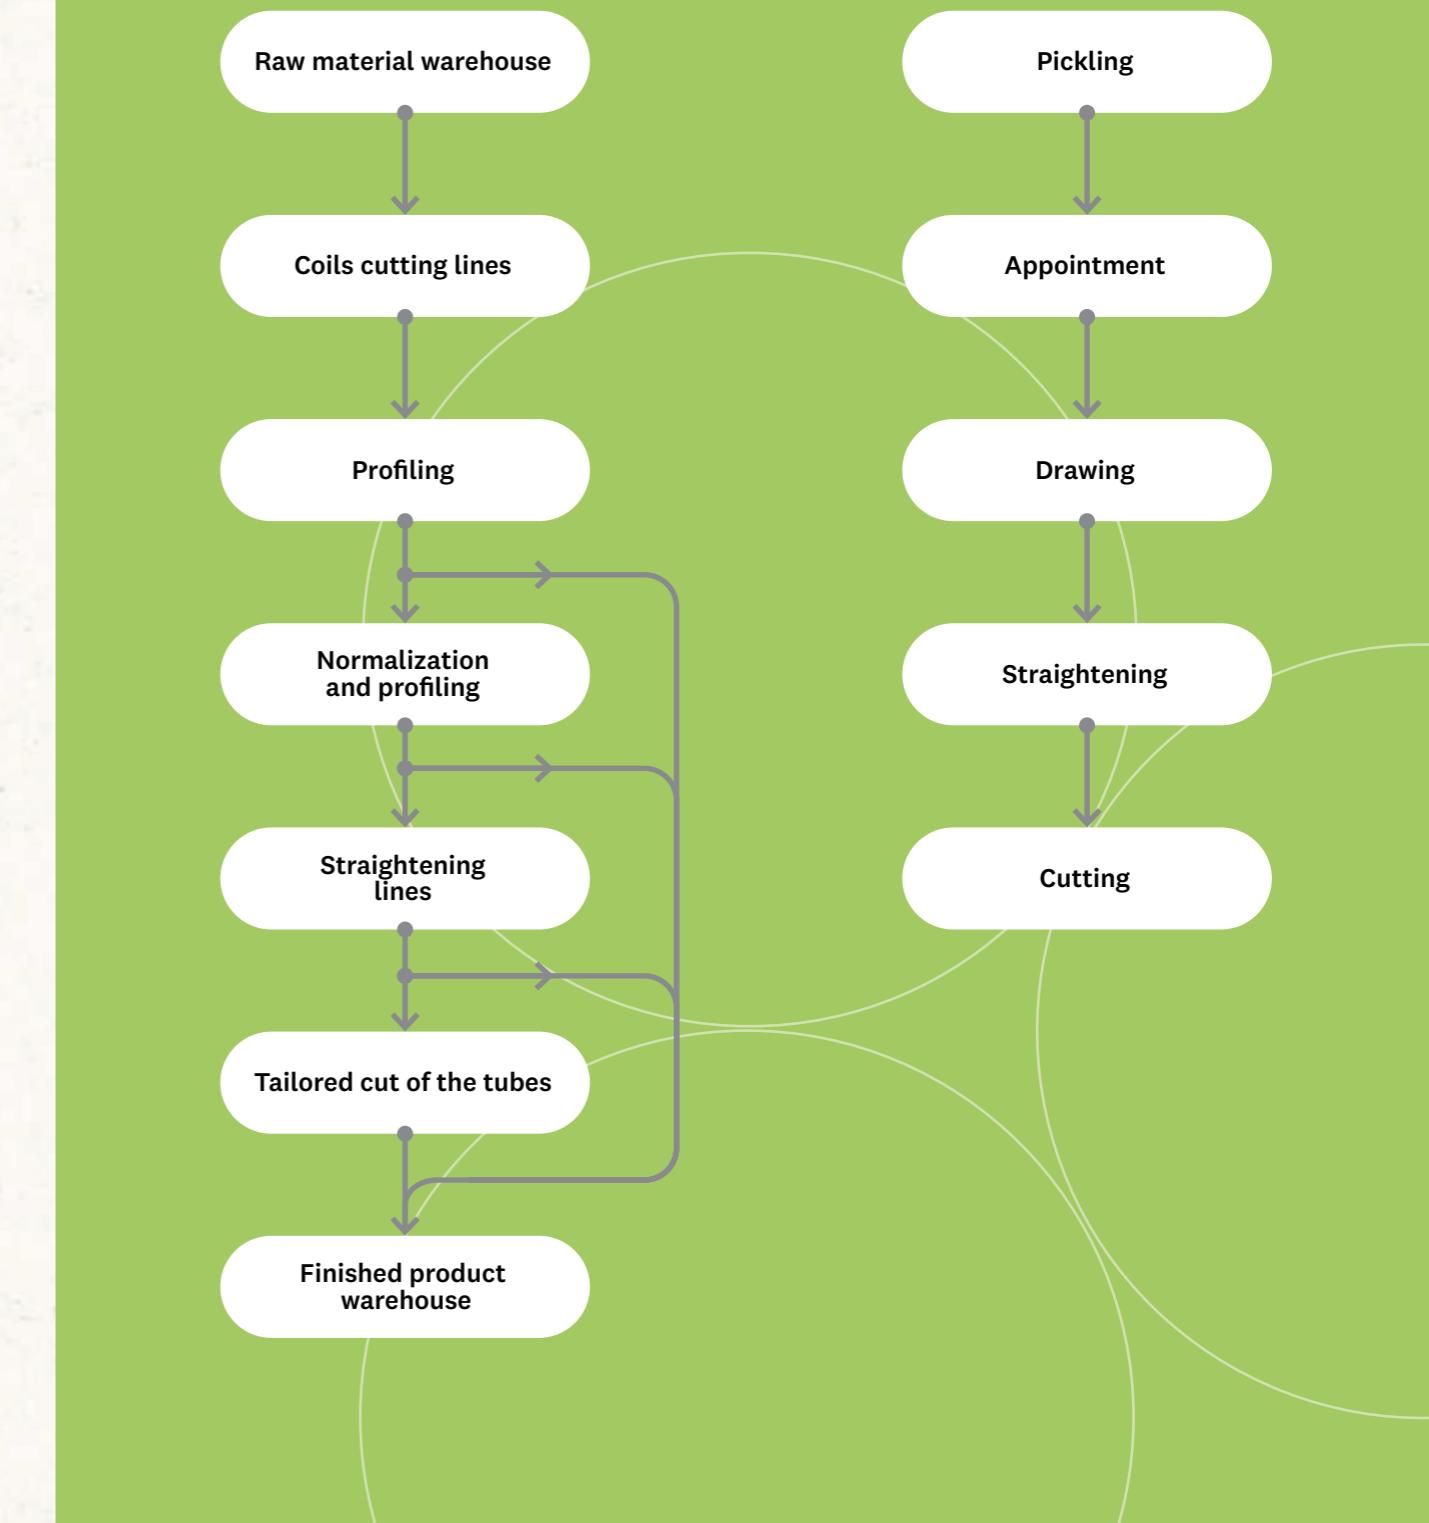

The wide range of additional processing and special grades satisfies the requirements of several industry sectors with value added, highly customized solutions.

La vasta gamma di lavorazioni e di qualità impiegate consente di soddisfare i requisiti dei più diversi settori produttivi con soluzioni ad alto grado di personalizzazione e valore aggiunto.

PRODUCTION PROCESS FOR  
THE PRODUCTION OF PIPES**

**BLOCK DIAGRAM  
OF THE PIPE DRAWING  
PRODUCTION PROCESS**

## Other informations

### DESCRIPTION OF THE MAIN ACTIVITIES

Starting from the raw material represented by carbon steel strips coming mainly from the factories of Marcegaglia Carbon Steel S.p.A. of Ravenna (RA), Gazoldo degli Ippoliti (MN) and Corsico (MI), the pipes are produced at the plants of Gazoldo degli Ippoliti (MN), Casalmaggiore (CR), Lomagna (LC) and Dusino (AT) by means of special plants called "pipe factories", aimed at the production of induction welded profiles. These systems can be schematized in three sections (entrance, central, exit). In particular, the belts, suitably sheared, are processed by profiling machines consisting of operating heads equipped with steel rollers to obtain tubes welded in line. Operationally, there are the following steps:

**INPUT SECTION:** consists of a feeding area and a belt accumulation area;

**CENTRAL SECTION:** this is the portion of the system dedicated to making the profile. It consists of:

- Forming - Finishing;
- Welding;
- Calibration;
- Cutting;

**OUTPUT SECTION:** is the portion of the system dedicated to the evacuation and unloading of the profile.

The production cycle of hot and cold tube mills is substantially the same: the difference consists in the type of rolling of the incoming strip, which may have been hot or cold rolled.

The factories in Boltiere (BG) and Rivoli (TO) are specialized in the drawing of steel tubes, in which the tubes represent the raw material. In order to be machined, carbon steel pipes must be previously treated on the surface. The surface cleaning operation is carried out chemically, through a degreasing and acid pickling process. In order for the subsequent drawing of the tubes to be carried out, they must be pointed. The pinning can take place before or after pickling.

The drawing process consists in the cold elongation of the tubes and the consequent reduction of their thickness by traction. Drawn tubes can then follow two paths:

- be destined in succession for straightening, cutting and dispatch;
- be destined for heat treatment and then undergo a second pickling treatment and subsequently the steps referred to in the previous point.

To recondition the raw material, restore the metal structure (modified following the drawing action) and to obtain a perfect cleaning of the pipes, the artifacts can be subjected to a heat treatment process.

### ALLOCATION RULES

An allocation was made on a mass basis for energy consumption, water discharges, atmospheric emissions and waste.

Modules declared, geographical scope, share of specific data (in GWP-GHG indicator) and data variation:

Module	A1-A3 Product stage			A4-A5 Construction process stage		B1-B7 Use stage							C1-C4 End of life stage				D Benefici carichi oltre i limiti di sistema
	Raw material supply	Transport	Manufacturing	Transport	Construction installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal

**X** = Module considered

**ND** = Module not declared

**GLO** = Global

**IT** = Italy

## Additional information

The raw material (black coil) purchased by Marcegaglia Carbon Steel S.p.A. it is characterized by a recycled content ranging from 24 to 29%.

The materials used for the packaging of the final products consist of plastic and / or metal straps, wooden saddles and polyester bands. The quantities of these packaging

compared to one ton of final product identify a value of less than 1%.

The products do not contain hazardous substances from the SVHC Candidate List for Authorization in quantities greater than 0,1%.

# Environmental information

The environmental performance indicators refer to 1 tonne of tube product.

## POTENTIAL ENVIRONMENTAL IMPACTS

## Additional information

Regardless of the type of product considered, the element that most affects the final result is the purchased element which represents the entrance to the various company sites, destined for the subsequent production of the semi-finished product. Among the processes carried out by the company, those that have the greatest impact are the heat

treatment of the tube as well as the profiling activity. The impacts of energy consumption determined by the processes carried out within the company are often marginal compared to the impact associated with the procurement of raw materials.

what is indicated in the "Special waste report" of ISPRA - No. 344/2021.

### MANAGEMENT SYSTEM

With reference to the management systems used by the company, it is emphasized that the presence of an environmental management system (certified pursuant to UNI EN ISO 14001: 2015) and safety (certified pursuant to UNI ISO 45001: 2018) testify to the company's commitment to pursue the continuous improvement of its environmental and safety performance, for example by properly managing the hazardous substances, the waste produced by its business as well as maintaining the pollutants emitted into the atmosphere as well as water discharges. Within the environmental management system there is also a specific data management procedure

for the study of the product life cycle. Year after year, the company plans new improvement objectives aimed at increasing its performance.

The company has implemented an energy management system certified in accordance with the UNI CEI EN ISO 50001: 2018 standard to identify the most relevant plants in terms of energy as well as define opportunities for improvement in order to reduce the energy consumption determined by the carrying out its business.
